ANGELUS BRITANNICUS

An *Ephemeris* for the Year

of our Redemption 1664 being the

Bissextile or *Leap-Year.*

And from the Creation of the World, 5613.

Amplified with

Astrological Observations from the Suns Ingresse into *Aries* and the other Cardinal points, from the Eclipses, Conjunctions and other Configurations of the heavenly Bodies.

Calculated for the Meridian of *LONDON* where the pole Artick is elevated above the Horizon, 51. degrees, and 32. minuits, but may indifferently serve for *ENGLAND*, *SCOTLAND* and *IRELAND*.

By *John Tanner*, Student in Astrology and Physick.

Cœlum ad nos spectat, Cœlum spectemus oportet,
Nam deus astra dedit cœlo, oculósque tibi.
Vix tibi pars terretis Terræ millena videtur:
Cœlum dimidiâ cernere parte licet.
Cur, igitur cœlo Terram, stultissime, præfers?
Ut mos est, Matrem plus patre forsan amas.

LONDON,
Printed by *Thomas Mabb*, for the Company of Stationers, 1664.

according to the Julian, English old Account.		according to the Gregorian, Foreign, or New Account.
12	The Golden Number.	12
21	The Cycle of the Sun.	21
☉ F	The Dominical Letter.	F ☾
2	The Roman Indiction.	2
11	The Epact.	2
20	The Number of Direction.	16

The Names and Characters of the seven Planets.

♄ ♃ ♂ ☉ ♀ ☿ ☽

Saturn, Jupiter, Mars, Sun, Venus, Mercury, Moon.

Dragons head and Taile.

☊ ☋

The Names and Characters of the Aspects.

⚹ □ △ ☍ ☌

Sextile, Quartile, Trine, Opposition, Conjunction.

Head and Face,

Neck and Throat. Armes and Shuolders,

Breast, Heart and back,

Bowels and Belly, Reins and Kidneys.

Private members. Thighes.

Knees. Legs.

Feet.

If you would know where the sign is, you must first finde the day of the month, & against that day you have the sign or place of the D. in the 10. column, if you find nothing but figures, take the Caracter that stands next before, then find it here, and it shews you the place of the body it governs.

Old Account,	Moveable Feasts according to the	New Account.
February 7	Septuagessima	10 February
February 24	Ashwednesday	27 February
Aprill 10	Easter Day	13 Aprill
May 15	Rogation Sunday	18 May
May 19	Ascension Day	22 May
May 29	Whitsunday	1 June
June 5	Trinity Sunday	8 June
November 27	Advent Sunday.	30 November

A Table of the four Terms and their Returns for 1664.

Hilary Term begins January 23 ends February 12
and hath four Returns.

Octab. Hill. January 21. } { Craft. Purif. February 3.
Quin. Hill. January 28. } { Octab. Purif. February 9.

Easter Term begins Aprill 27. ends May 25
and hath five Returns.

Quind. Pasc. Aprill 25. } { Quinque Pasch. May 16.
Tres Pasch. May 2. } {
Mense Pasch. May 9. } { Craft. Ascent. May 20.

Rowland Pepin, *famous for the Cure of Rupture, or broken Belly these 50. years, he makes easie Trusses of all kindes: He liveth in naked boy Court, neer Strand-bridge without Temple-bar* London.

January hath XXXI. Days.

Month days. Week days.

Assist yee Muses, and some skill impart
To my chil'd brain, illuminate with art
My frozen fancy, help me to descrie
Each Spheare, each motion of the spangled Skie:
Keep my low Genius in its lower Spheare,
Least that Apollo *twitch me by the eare.*

Month days.

Welcome kinde friends unto our homely cheare,
Oh! that I might say to a happy yeare;
Mars with the Senior Planets doth comply,
And they receive each other lovingly;
Wer't so with you, in Gods name and to's praise,
I would pronounce peacefull and happy dayes.

		△ ♄ ♂ 4. m. ✶ ☿ ☿ 5.

Month dayes. Week dayes.

On the first day the Eastern world may see
The Moon quite hid under Earths Canopie:
The god of War attends her through the skies,
To execute heavens vengeance doth devise:
Transcendent actions follows such defects,
Let them that see't, beware of the Effects.

Moones days.

The Souldier swells, and the whole multitude
Grow feirce, and weary of their servitude;
Ambition makes them new things to devise,
Forsake their peace, run after Novelties:
They long for new Lords, and for new Laws too,
Oh! who can think what discontents will doe?

THEOMAGIA, or the Temple of Wisdome, in three parts, Spirituall, Celestiall and Elementall, containing the Occult Powers of the Angels of Astromancy in the Telesmatical Sculpture of the Persians, Chaldeans and Egyptians: The miraculous vertues of the Characters of the Stars, with the Genii. Idea's and Figures of Geomancy, upon the Geomantick, and the Resolution of all manner of Questions, Past, Present and to Come. The Holy Guide, or English Physitians Tutor, in Rosie Crucian Medicines and the Mysterious secrets in Nature, by John Heydon Gent. to be sold by H. Brome at the Gun in Ivie-lane.

Month dayes, Week dayes,

With wrinckled brows grim Saturn *greets the Sun,*
Just as his farthest Southern race he run;
He takes his throne and Saturns *wrath doth slight,*
Descends our Horizon, bids us good night;
Mars *friendly smiles, but in the Northern Angle,*
Love and the Moon doth seem inclin'd to wrangle.

Month-days.

Mars in the house of Pleasure hath espied,
The Lady Venus all be Frenchified,
The lusty Gallants angry, and doth raile,
'Cause shee's attended with the Dragons taile;
Look to't ye wanton Lads, lest that you rue,
Your foolish sporting with a Maungie Crue.

Aprill hath XXX. Dayes.

With loving Trine *old* Saturn *doth comply*
With Kingly Sol, *grave* Jove *doth by and by*
Congratulate his Highnesse, who with grace
To them and us, vouchsafes his glorious face:
Thus with their frowns or smiles, they grieve or ease,
They make us feare or hope, even when they please.

May hath XXXI. Days.

Though Sol and Jove thus lovingly comply,
Gravely invites us unto unity,
Yet rebell Mars that Master of disorder,
whose sole delight's in battle blood and murther;
Puts us in feare with's bugbear Tyrannies,
And the worst instruments he can devise.

Likewise before the Month is fully spent,
Behold old envious Saturn's *malecontent,*
(As well he may) with Mars, *who makes him feel*
His angry force and ways, that makes him reel:
His anger Scarlet characters doth yield,
With bloody ink he dyes the Grave and Field.

July hath xxxi. dayes.

Mars t' heavens equal ballance now is come,
With seeming friendship bids Sol welcome home:
Then with a hateful square he darts at Jove,
His malice soon obliterates his love:
So seeming friendship's a cloak for deceit,
And shrowds designs that be of greatest weight.

July 1664.

Month days.

You that delight to view heavens Canopie
Of glitter Stars; Behold the Azure skie,
On th' seven and twentieth day at night, you'l see
Near the mid-heaven a famous prodigie;
The Earths concomitans her beauty lade,
Her body quite obscured by earths shade.

In the mean time let's view the Heavens, and see
What this Months Aspects seem to signifie:
The Stars emit to each other loving rayes,
And Sol *and* Jove *proclaimeth happy dayes.*
Let mercy and justice rule the Sons of men,
I will consent, and gladly say Amen.

September 1664.

Month days.

My mind's not careful what is the result
Of our great grandees serious, close consult:
I mind far lower, sometimes higher things,
Which rule all Rulers, even the highest Kings:
My worldly portion's small, I am content,
As a poor subject, and obedient.

Month days.

October sixty two I cann't forget;
Ah Branford Butcher I think on thee yet:
Mistaken Justice, that's no uncivil mark,
Unfortunate having no wiser Clerk,
Thanks honest Ball for thy civility,
May all that's good requite thy honesty.

November 1664.

Month days.

Spain must expect to suffer yet much more,
Gods will be done, let her pay all the score:
May England scape her vengeance, Lord her spare,
And let her great Metropolis beware:
Let's bow before Gods throne, and own his power,
Recal to mind the acts of thirty four.

	Lunations and other observations	Aspects & weath.

December 1664.

My wearied pen is glad to end the year;
My weather Genius joyes to rest her here:
My soul to implore Gods mercy doth aspire
To th' Throne of Grace, from England keep thine ire:
All hail great King Christ keep his Church from woe,
Preserve thy Preachers and thy people too.

Month days.	Lunations and other Observations.	Aspects &c.
1		Seasonable weather at the beginning of the Month.
2		
3	☿ riseth with the Scorpions heart.	
4

Astrological Observations for the YEARE. 1664.

BEfore I come to make any Observations of the Cardinal ingresses, I shall by way of example, explain the use of so many of the Tables in the Almanack, as need any explanation. I shall do it onely by way of example, having formerly sufficiently taught the use of them.

To know the time of High-water at *London-bridge* or elsewhere upon the 30. day of *January* this Year, I first count, how many days old the Moon is, from the day she changed before, and I finde her to be 13 days old; then I have recourse to the two Tables immediately before the Ephemeris or Almanack: In the first of which Tables, I finde *London* and the figure 5. answering there to, which is the point of the compass I next look for 5. in the other Table, (which shews the hours and minuits of high water,) among the great figures on the head of the Table, and 13. which is the Moons age in the first Column, so entituled, the Moons Age, and in the common angle of meeting place, we finde 1 hour 24. min. which is the time of high-water at *London-bridge*. The same day at *Bristoll*, whose point of the Compass is 10, it is full sea at 9. min. past 5. the same day at *Queenborough*, *Southampton*, *Portsmouth* and the *Isle of Wight*, which are under the 1. point of the Compass, their full sea is at 24. min. past 10. of the clock: so you may easily gain the time of high-water at any time, or at any place mentioned in the table, though not so exactly, as if the Latitude of the Moon were duly considered, which makes her Southing happen sooner or later & consequently the Tides also, the winds and Landflouds due cause the Tides sometimes to vary from the time found in this Table. The five tables after the Ephemeris serve for erecting a Celestial Scheam or figure of heaven, thus. The full moun preceding the Vernal ingresse happeneth upon Wednesday the 2. day of *March* at 11. min. past 2. in the morn. that is at 14. hours 11 min. which converted into degrees of the Æquator by the first Table gives 213. degrees almost, the ☉ is in 22. degrees of ♓ in the 2. table; I look for his right Ascention, I first find 22. in the first column, and

right against that number in the last column under ♓ I finde 353. which is the Suns right Ascention. I add 353 and 213. together, and the sum is 566. because this number exceeds the whole circle, I substract the whole Circle 360 from it, and there remains 206, which is the right Ascention of the midheaven; I look for this number in the table of right ascention, and find it in the 8. column under ♎, and the number answering thereunto in the 1. column is 28. Therefore 28. deg of ♎ is upon the cusp of the midheaven; to the right ascen. of the midheaven I add 3[illegible]. which makes 236. which is the obl. ascen. of the 11. house. I look for that number in the next table of Obli. ascen. for 32. degr. which gives 17. degr. of ♏ for the cusp of the 11 house, to 236 I add 30, which makes 266. the Obl. Ascen. of the 12. house; I look for that number in the Table of Obl. Ascen. for 47. deg. 28. min. and it answers to 4. deg. ♐ which is the cusp of the 12. house; I proceed and add 30. more, and it makes the Obl. Ascen. of the first house or Horoscope 296, with that number I enter the table of Obl. Ascen. for 51. deg. 32. m. & finde it against 24. degr. of ♐, which is the cusp of the first house. To 296. I add 30, and it makes 326. the Obl. Asc. of the 2. house, I enter the Table for 47 deg. with that number and it gives the cusp of the 2. house 0. deg. of ♒, add 30. more and the Obl. Ascen. of the third house, is 356. with which I enter the table for 32. deg. and it gives the cusp of the house in 24. ♓. the same degrees of the opposite signes are the cusps of the opposite houses.

Of the Spring Quarter.

Qui scribit, laudatur ab his, culpatur ab illis;
Lectoris vultu statq;, acaditque sui.
Semper agit causam, nec tempore transiget ullo;
Semper enim sub te judice, Lector, erit.
Who writes and publiquely presents the same,
If some him praise, he's sure of others blame:
By his Readers countenance he stands or fall,
Some smile, some frown, alas! who can please all?

The

He always pleades, his cause, and hath no rest,
Till judgment's past in every Readers breast.

THe Spring quarter begins when the Sun enters the Vernal Æquinoctial signe *Aries*, and this Year it happeneth on Wednesday the 9. of *March* by the computation of Mr. *Vincent Wing* at 6. hours and 7. seconds afternoon. The learned *Etchstadius* hath calculated it to commence at 5. hours and 20. min. in the Meridian of *London*, they differ 40. min. in their computation; But by *Astronomia Carolina*, composed by Mr. *Tho. Street* the difference is more considerable, for by his Tables the Vernal Æquinox happeneth on the 9. day somewhat after 8, The figure of heaven according to Mr. *Wings* time is thus, the very beginning of the ballance occupieth the Eastern Finitor, and 0. deg. and 2 min. of the Crab mediates the heaven. At the preventional full Moon ♄ and ♅ were in the Eastern Angle; and in this figure the Moon and Jupiter are located in the Angle of the Earth; Saturn also not above two deg. removed from the Cusp. At the postvention al New Moon ♄ is in the aforesaid angle, and ☿ in the West. If we consider the figure it self, the foure angles are moveable, and all the Planets (Mars and Venus excepted) in moveable and common signes, and all the Planets (except *Mars*) under the Earth. ♀ Lady of the Ascendant in the 5. house, neer the degree of a Lunar Eclipse to be celebrated on the 27. of *July* next. She is unfortunately placed with the Dragons taile, and in opposition to ♂, spending their Sodomical influence upon the sensuall crue, who are most apt to take the impression of debauchery & lasciviousnesse. The ☽ who is lady of the tenth, the house of dignity, and ♅ who is therein exalted, are debilitated in the fourth house, the ☽ in her detriment, and ♅ in his fall, ☿ who is partly lord of the 9 house, the house of Religion, is in his detriment, retrograte, under the earth, and in an unfortunate house, but somewhat assisted by the rays of the ☽ and ♅, his partner ♀ being debauched by the opposite rays of ♂ as I said before. I shall satisfie my self, and I hope not displease my Reader, in forbearing to give any Astrological judgment, upon the several Positions, but conclude with the Poet,

Non facio ut multi, qui multa & stulta loquuntur:
Sermo meus stultus forte, tamen brevis est.
With many words their folly some beworay,
I'le use few words, though I the fool should play.

Of the Summer Quarter.

THe Summer quarter alwayes begins, when the Sun enters the first point of the *Tropick Cancer*, which happeneth this Year on Friday the 10. of *June* at 9. of the clock at night, at which time there ascendeth upon our Eastern Horizon 11. deg. and 40. minuits of the Celestial Goat, and upon the Midheaven there culminates 17. degrees and 29. min. of the Scorpion. At the preventional full Moon 14. degr. of the Scorpion riseth, and upon the midheaven is the first degree of the Virgin. At the postventional New Moon the Ascendant is 16. degr. of Sagitarius and the midheayen 17. degrees of the ballance. In the Tropical figure ♅ is in the Eastern angle: ♂ Mars descending in the 8. house in ♏ in partill △ to ♅. The ☽ in the 4. house in the Bull, but a little seperated from a △ of them both. ♄ is in the 11. house but a little above the Horizon: ♀ in the fifth house in ♊, or the twins; and ☿ in the Crab in the weastern Angle. In the preventional figure ♂ is angular in the 10 house, and ♀ in the 1. At the New Moon postventional, ♄ & ♅ are both in the Ascendant, and the ☉ and ☽ in the 7. From all which we may conclude that the ayre for the most part will be inclinable to temperature with (at some time) thunder storms and showers, *viz.* at such times as such Planets conjoyn or aspect each other, as hath such signification: See more in the perticular judgment of the Weather.

Of the Autumn or Harvest Quarter.

THe Harvest Quarter or Autumn commenceth, when *Sol* enters the ballance or Æquinoctial signe *Libra*, making the days and nights of equall length. It happeneth this year on Monday the 12. of *September* at 6. min. afternoon. At the New Moon preventional 8. deg. of the *Ram* is upon the Ascendant, and 3. degrees of the *Goat* upon the Cusp of the 10. house. At

bra;

the postventional full Moon, the Ascendant is 5. degr. of *Libra*, and the midheaven 7. degr. of the Crab. If you behold the Autumnal figure it self, you will finde 4. degr. and 25. min. of ♐ upon the Horoscope; and 1. deg. and 38. min. of ♎ upon the *Medium Cœli*. The superiour Planet ♄ ascends in the Eastern angle, and ☿ and ♀ in the midheaven. ☿ in ✶ to ♄, and soon after ♃ comes to a □ of ☿, and then to the Suns □. From which configurations we may probably conjecture, that the aire for the most-part shall be inclinable to serenity, temperance and wholesome windes, for their Aspects are from dry signes.

Of the Winter Quarter.

THis Year Winter begins on Saturday the 10. of *December* at 47. min. past 11. at night, at which time the Sun entereth the first scruple of the *Tropick* of *Capricorn*, making the shortest day and longest Night. On the seventh day preceding there is a New Moon near noon, and the Figure of heaven for that time is as followeth; the Ascendant is in 17. deg. of the Fishes, and the midheaven 25. degr. of *Sagitary*. The ☉☽ and ♄ in the midheaven. In the Postventional figure 22 deg. of the Lion Ascen. and 8 deg. of heavens Bull mediates the heaven; all the Planets out of angles and beneath our Horizon, the Moon excepted. In the figure of the Winterly ingresse it self, the Ascendant is 27. deg. and 42. min. of the Virgin; and the mid heaven 27. degrees, and 3. min. of the Twins; the ☉♄♃♂ and ♀ are all in the fourth house, the ☉ hastening to ☌ with ♄, whose influx will make us sensible of an *Apartio Portarum*, cloudy and very cold weather, with frost and snow.

Of Eclipses happening this Year, 1664.

AN Eclipse is caused by a darkening or hiding of the Luminary by the interposition of some *Opacous* body. It is called in Latine *Deliquium* or *Defectus*, by the Greeks Ἔκλειψις. An Eclipse of the Moon is thus defined, *Privatio luminis in luna Orta à diametrali terræ inter solem & lunam oppositione*:

That

That is, when the body of the ☽ is deprived of the Suns light, by the direct interposition of the Earths solid and opacous body between the Sun and her. The Moons Eclipse alwaives happeneth when she is at Full; for then she is in Opposition to the Sun, and if this Opposition happeneth in the Head or Taile of the Dragon, then are the Centers of the Sun, Moon and Earth, in a straight line, and the whole body of the Moon passeth through the Earth's shadow, and she looseth her borrowed light, and the Eclipse is totall. But if the Moon doth incline from either of her Nodes; yet if her Latitude be lesse then the sum of the Semidiameters of the Moon, and the Earths shadow, she will be Eclipsed: But if her Latitude exceed, there will be no Eclipse that full. Therefore the quantity of the defect and the continuance is known, by the quantity of the Moons motion, of her latitude, and the Earths shadow.

An Eclipse of the Sun is *Interceptio Luminis solaris profecta ex interpositione lunæ inter solem atque aspectum nostrum:* it is an obscuration of the Suns light caused by the interposition of the dense body of the moon between the Sun and us, *&c.*

Twice in this Year shall the inhabitants of this earthly Glob be deprived of part of the glorious lustre of the Suns beams; and as many times shall the borrowed light of the Moon be obscured from their Eyes. We in *England* shall onely see one, which is a totall Eclipse of the Moon. The first is a small Eclipse of the Sun, on Monday the 18. of *January*, but will not be visible to us. The second is an Eclipse of the Moon, on Monday the 1. of *February*, it is a great and totall defect, though not visible to us, it will be seen by the Eastern parts of the World, *viz.* the inhabitants of the more Eastern parts of great *Tartaria*, *Melain*, *Sandri*, *Cambalu*, and in many places remote and little known to us. The 3d. is an Eclipse of the Sun upon the 12 of *July*, it is but a small one, and not visible to us.

The fourth and last is a great and totall Eclipse of the Moon, upon *Wednesday* the 27. of *July*

12 *House*	♈	17	30	3 *House*	♋	21	23	*the opposite*
								signes.

If we consider the place of the Eclipse, the degrees of the Cusps of the *Medium Cœli*, and Ascendant, and what Planets have most Dignity and Dominion in those places, we must ascribe *Saturn* and *Mercury* to be Lords of the Eclipse. Concerning the quality of the Effects; first it is to be considered that ♒ is a fixed Signe. *Cardan* that famous Astrologian, and learned Commentator upon Ptolomy, saith, *Fixa igitur res significant, quæ illis merito debentur: Debentur autem ædificia, &c.* Fixed Signes doe signifie those things, which most properly do belong to them, as buildings *&c.* An Eclipse in the mid-heaven hath signification of *Perfecta & magna authoritatis, templa & reges, qui sunt in magna veneratione*: things perfect and of great authority, of Churches and great men, who are in great Veneration and Esteem. If *Saturn* rule the Eclipse, saith the aforesaid Author, *Corrumpit genitaliter frigore, &c.* Causeth corruption by reason of cold, he causeth long and continued diseases in the bodies of men, Consumptions having their original from a defluxe of Rhume; Fluxes, Quartan Agues, *&c.* Banishments, Poverty, Misery, mortality of old men Scarcity, Sickneſſe and Death to such Cattle, as are most usefull to men.

In

In the aire he ſtirs up cold froſts, ſnow, thick clouds, and miſts unprofitable and deſtructive, and many dangers and inconveniences at Sea and Land, *&c. Mercury* ſignifieth great celerity, induſtry, craft and ſubtilty in performing what is then upon the ſtage of the World: He obſtructs the High-wayes with Thieves, and the Sea with Pyrates: He afflicts mens bodies with Ptiſicks, Conſumptions, want of breath, *&c.* alteration in Religion, in Ceremonies, Hereſies and Schiſmes, detriment to the Revenues of Kings; Controverſies about Cuſtoms, Laws and Priviledges of the People, he produceth inordinate high-windes, and ſudden tempeſts, *&c. Junctinus* ſaith, that an Eclipſe in the Airey Triplicity preſageth ſcarcity, cruell ſickneſs, and peſtilent Diſeaſes, tempeſtuous and ſtormy Windes. *Proclus* ſaith, That an Eclipſe in the ſecond decanate of ♈, *Sementem lædit univerſalem*, it univerſally hurteth the Seed of the Earth. The places ſubject to the influence of this Eclipſe, are thoſe under *Aquary*, *Leo*, *Taurus*, *Scorpio*, *Gemini* and *Libra*; the Effects of this Eclipſe will ſhew themſelves about the beginning of *January* next, and continue four moneths.

Mr. *Wing* hath calculated alſo a Mercurial Eclipſe to happen upon the 25. of *October* at 12. min. and 44. ſeconds paſt 7. at night, but he doubts whether it will be viſible in *England*, becauſe *Mercury* enters not upon the Sun till Sunſet; but by *Eichſtadius* calculation it will happen at 31. min. paſt 3. and enter upon the Sun about one: It were worth while for thoſe that are fitted with convenient Inſtruments to make ſtrict Obſervation thereof.

Certain neceſſary Rules for the adminiſtration of Phyſick, letting of Blood, &c.

THe powers of the body of man are threefold, *viz.* Naturall, Vitall and Animall; the natural Power is ſeated in the Liver and is governed by *Jupiter*, aſſiſted by *Luna* and *Venus*. From this is bred the four humours, *viz.* Blood, Choller, Phlegme and Melancholly. Blood is made of meat perfectly concocted, in quality hot and moiſt, and is under *Jupiter*. Choller is made of meat more then perfectly concocted,

It

It is the Spume or Froth of the Blood, hot and dry under *Mars*. Phlegme is made of meat not perfectly digested; it is cold and moist in quality under the *Moon* and *Venus*. Melancholly is the Sediment of Blood, cold and dry in quality, governed by *Saturn*.

The naturall powers comprehends these foure administring Virtues or Faculties, *viz.* Attractive, Retentive, Digestive and Expulsive; the Attractive faculty is hot and dry under the influence of the *Sun* and *Mars*, fortified when the Moon passeth through *Aries*, *Leo*, *Sagittarius*; the retentive faculty is cold and dry under *Saturn*, and is strengthened, the Moon in *Taurus*, *Virgo*, *Capricornus*; the digestive is hot and moist ruled by *Jupiter*, fortified the Moon passing through *Gemini*, *Libra*, *Aquarius*. The expulsive is cold and moist under the Moon, assisted by the Moon in *Cancer*, *Virgo*, or *Pisces*. In strengthening these faculties, let the Moon be in one of those signes, or let one of them Ascend. The Vitall Power is seated in the heart, and is governed by the Sun, it is strengthened by its medicines, and is best done when the Sun is in Aspect with the fortunes, *viz.* *Jupiter* and *Venus*.

The Animall faculty hath its residence in the brain, and is divided into Intellective and Sensitive; the first is under the influence of *Mercury*, the other of the Moon, and are both assisted by the benevolent rays of *Jupiter* and *Venus*.

The Moon in *Cancer*,	♑	Purge Melancholly,
Scorpio or *Pisces* in	♀	Purge Choller,
Sextile or *Trine* to	☉♂	Purge Phlegme.

To prepare humors let the Moon be in *Gemini*, *Libra*, *Aquarius*
Take Glisters the *Moon* in *Aries*, *Libra*, *Scorpio*.
Take Vomits the *Moon* in *Aries*, *Taurus*, *Capricornus*.
Take Gargarismes the Moon in *Aries*, *Cancer*.
Purge the head by sneezing the Moon in *Cancer*, *Leo*, *Virgo*.
Stop Rhuemes the Moon in *Aries*, *Taurus*, *Capricornus*.

For Bathing let the Moon be in signes contrary to the Nature of the Disease. Sweat two or three dayes after the Change, or about the Full Moon; and let the moon be in *Aries*, *Leo*, or *Sagitarius*.

The

The season for bleeding is at Spring and Fall.

Let young People blood from Change to the First quarter.
Bleed the middle Aged from the First quarter to the Full.
Elder Age bleed from the Full to the Last quarter.
Old Age bleed from the Last quarter to the Change.

Bleed the	Sanguine Chollerick Phlegmatick *Melancholly*	the *Moon* in	♋ or ♓ ♎ or ♒ ♈ or ♐ ♉ ♍ ♑

It is better if the *Moon* be in Conjunction, Sextile, or Trine with the Fortunes; or the Planets in like Aspects among each other: The *Moon* in ill Aspect with the Infortunes, or the Infortunes so configured, forbid Phlebotomy. Let not the *Moon* be in *Gemini*, or *Leo*. Observe these Rules unlesse in the Plurisie, Phrensie, Quinzy, Apoplexy, &c. where Phlebotomy ought not to be delayed.

Qui legis ista, tuam reprehendo, si mea laudas
Omnia, stultitiam, si nihil, invidiam.

My work is finished, and what I have writ;
Unto the Readers Judgment I commit.
" If he praise all, I will him reprehend
" Of Folly; but he that will discommend
" (Without exception) all; I will accuse
" Of Envy, which his judgment doth abuse.
I beg no praises, and I can contemn
Such Criticks that my failings doe condemn:
But you that know me will my faults pass by,
And grant the Guerdon of my Loyalty;
And when *Apollo* warmes me with his rayes,
Your Love I will requite with all due praise;
Yee noble Soules, who in virtue doe excell,
'Tis you I honour, you I bid Farewell.

Amersham in the County of *Buckingham*
August the 15. 1663.

FINIS.

Books lately Printed.
